The Visit

The Teesside Panel of the IMechE has organised an industrial visit for 2pm on the 18th March 2020 to JDR Cables in Hartlepool (JDR Cable, Victoria Dock, Greenland Rd, Hartlepool TS24 0RQ). This site tour should be of interest to a wide range of members as we learn about the design, manufacturing and testing processes for world leading offshore power cables and umbilicals.

About JDR

Serving the offshore renewables and oil and gas sectors, JDR Cable Systems is a global leader in the supply of submarine power cables and subsea umbilicals. JDR also provides market leading services to support customers during design, installation, commissioning and throughout the project’s operational life. In August 2017 JDR joined TFKable Group, a leading global producer of wires and cables, with major production facilities in Europe and sales offices globally.

Important Information

The visit is limited to 30 members and places are expected to be booked up quickly. The site is located on a commercial port facility and it is a condition of entry to the port that all visitors complete an online induction for both the port and JDR Cables and that members (where possible) bring their own PPE gear.

Upon registering your place on the visit please email teessidechair@imechenearyou.org with your name and where you will be travelling from. Details of the induction forms and transportation details will then be sent to you.

We must advise that if the above details and induction forms are not completed you will unfortunately not be allowed entry to the site.
