HINKLEY POINT C – A LANDMARK POWER PROJECT FOR THE UK

Institution of MECHANICAL ENGINEERS

SPEAKER: Nigel Knee

Improving the world through engineering

Hinkley Point C is the first new nuclear power station to be built in the UK for 30 years. The construction site in Somerset is the largest in Europe, and when complete the power station will provide enough low carbon electricity to power around 6 million homes.

This lecture will explain why the decision was made to restart nuclear build in the UK, as well as aspects of the design, planning and construction activities. The role of nuclear in the UK's energy mix will be explained in the context of the "Great British Nuclear" programme announced earlier this year by the Government.

Wednesday 15th November 2023, 18:00 refreshments for 19:00 start

Marconi Lecture Theatre

Kimmeridge House

Bournemouth University

Fern Barrow

Poole

Dorset
