Technical Visit to The Automated People Mover (APM) Depot
Hong Kong International Airport

The Automated People Mover (APM) takes passengers from Terminal 2 to Terminal 1 and between Terminal 1 and SkyPier. Travelling at more than 63 kilometers per hour, this driverless electric train system carries about 7,200 passengers per hour and departs every two to four minutes.

This visit has concentrated on the depot facilities of the APM.

On November 24, 2012, the IMechE HK Branch organized a technical visit to APM Depot inside Hong Kong International Airport. The technical visit provided a good opportunity to our members and engineers to understand more about The Automated People Mover. During the visit, the staff of APM introduced fully in the areas of operation, system control, mover management, future planning and their state-of-the-art maintenance facilities of APM.

To the success of this visit, we would like to thank Ir Joseph Lam and Mr Kyle Tam of HKIA for his outstanding presentation and tour guide for the whole visit.
