

	BIOGRAPHICAL INFORMATION	POLICY STATEMENT
<p>Adam Thomas Lord CEng, MIMechE</p> 	<p>I am originally from Cambridge, UK and I have studied Engineering with Sustainability in Warwick University. Today I am a mechanical design engineer working for Siemens Gamesa Renewable Energy in Hamburg, Germany. I have been a member of the IMechE since I was a student and achieved full professional registration as CEng MIMechE in February 2016. Since that time I have volunteered for the IMechE in Denmark and Germany. Currently I am working to set up a Speak Out for Engineering event in TU Dresden for 2019, as well as investigating possibilities to start a cooperation with Greenpower in Germany.</p>	<p>I am aware of the challenges the IMechE faces in Europe to promote its message and values. There are many competing institutions and the membership can be quite widely dispersed. Nonetheless, I see opportunities to make valuable activities and events for young members. I would like to increase engagement amongst the existing young members to let them know what the IMechE can offer them both now, and later on in their careers. As an overall coordinator and a representative for Germany, I would take what succeeds in Germany as an example to follow for other European countries.</p>
