

# HyNet: Delivering low carbon hydrogen at scale

HyNet is the UK's leading industrial decarbonisation cluster, integrating carbon capture and storage with production, distribution, storage and end use of hydrogen at scale. This project will deliver low carbon hydrogen from 2025 and by 2030 will save 10 million tonnes of carbon dioxide and deliver enough hydrogen to replace almost half of the North West region's current natural gas demand. This presentation will provide an overview of the project and how it provides a template to deliver a key element of our 2050 obligations.

## **Event Details**

**Event Type:** Webinar (free to attend)

**Speaker:** Chris Manson-Whitton DPhil (Oxon) MEng (Cantab) – Director

**Date:** Wednesday 10th March 2021

**Time:** 7:00pm to 8:30pm (Talk and Q&A)

**To register:**
