

Plastic Recycling – Technical Solutions to an Environmental Challenge

When: Tuesday 6th March, 19:30 (after AGM)

Where: EDF Energy, Barnwood, GL4 3RS

The problem of plastics recycling has been headlining since 2017. Plastic is a versatile and useful material but the challenges of managing its end-of-life are now being realised as news of damaging micro-plastics and giant floating islands of rubbish, in addition to China's refusal to take any more UK plastic hit the headlines.

Gloucester IMechE welcomes Adrian Griffiths, CEO of Recycling Technologies, to EDF Energy's Barnwood Conference Centre to tell us about how his company has revolutionised plastics recycling.

The presentation on March 6th will cover:

- The plastics market and plastics recycling
- How mechanical and chemical recycling combine so no plastics are left behind
- The detail of Recycling Technologies' recycling process
- Closing the loop on plastic recycling

When: Tuesday 6th March, 19:30 (after AGM at 19:00), refreshments from 18:45

Where: EDF Energy, Barnett Way, Barnwood, GL4 3RS
