Improving the world through engineering

The Engineering Careers series is a talk event series being launched by the Greater London Region Young Members Panel. The series showcases various disciplines and career pathways within the engineering industry. Find the career opportunities available to young engineers today!

Its time for our second instalment of the engineering career series. This time we will hear from Joelle Doocey!

Joelle Doocey is a Mechanical Building Services Engineer working for Atkins. She works on the design of Heating, Ventilation and Air Conditioning (HVAC) systems within the built environment. Projects she has worked on include residential properties as well as many Net Zero retrofitting projects.

Joelle studied Mechanical Engineering MEng at the University of Birmingham where she completed 4 years of study. She has now completed the Atkins graduate scheme and now works as a Mechanical engineer as part of a multi-disciplinary team. Joelle recently competed in Teambuild 2022, a construction industry competition weekend, where her team were successful as overall winners of the competition.

Make sure to register on the IMechE Near You Page to hear about Joelle's journey from studies to Atkin's Mechanical Engineer. In what will be an insightful discussion for developing and experienced engineers alike!
