BIOGAS ENGINEERING

Join us for this on-line presentation by Keith Knight, Director of Marches Biogas:

Thursday 17th March 2022 commencing at 7:00 pm

Institution of MECHANICAL ENGINEERS

Keith Knight is the Divisional Director of Marches Biogas responsible for its engineering design, construction and consultancy business - while also overseeing the company's progress within the waste water industry.

Anaerobic digestion of biomass is the base process in the production of biomethane – a direct substitute for natural gas. They share the same properties, and biomethane contains over 96% CH_4.

Ofgem has recently launched its Green Gas Support Scheme, to promote the construction of some forty major AD plants during the next 10 years. It will make particular demands on the AD industry's professional engineering assets, and IMechE members in particular.

Keith will discuss the various stages in the production chain, and why they are necessary.
